Claims 1-3 and 6-9 are allowed. For allowance they are renumber as 1-7, respectively.

The following is an examiner's statement of reasons for allowance:

The prior art discloses noise and interference elimination in co-located systems using various methods. The present invention differs from the prior art by using the specific system including a wireless base station comprising: a first and second base stations for transmitting and receiving signals having a different frequency band respectively, said first and second base stations being placed in the same case as a combo; first subtraction means for, when said first base station is in a transmitting state and said second base station is in a receiving state, subtracting an attenuated value from a received signal of said second base station, said attenuated value being obtained by multiplying a transmission signal from said first base station by a predetermined attenuation ratio; and second subtraction means for, when said second base station is in a transmitting state and said first base station is in a receiving state, subtracting an attenuated value from a received signal of said first base station, said attenuated value being obtained by multiplying a transmission signal from said second base station by the predetermined attenuation ratio,

or a wireless terminal comprising: a first and second transmitting/receiving sections for transmitting and receiving a signal having a different frequency band; first subtraction means for, when said first transmitting/receiving section is in a transmitting state and said second transmitting/receiving section is in a receiving state, subtracting an attenuated value from a received signal of said second transmitting/receiving section, said attenuated value being obtained by multiplying a transmission signal from said first transmitting/receiving section by a

predetermined attenuation ratio; and second subtraction means for, when said second transmitting/receiving section is in a transmitting state and said first transmitting/receiving section is in a receiving state, subtracting an attenuated value from a received signal of said first transmitting/receiving section, said attenuated value being obtained by multiplying a transmission signal from said second transmitting/receiving section by the predetermined attenuation ratio. When incorporating all the limitations of each respective claim, none of the prior art discloses the features as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
